

ABSTRACT OF THE DISCLOSURE

00759466-011601

The present invention provides a system for managing a
5 manufacturing processes including at least a batch-process for a batch
which comprises plural product lots. The system comprises : a host
computer ; at least a batch-manufacturing apparatus for carrying out a
batch-process under control of the host computer ; at least a stoker for
storing the plural product lots ; at least a carrier for carrying the plural
10 product lots between the batch-manufacturing apparatus and the stoker
under control of the host computer, wherein a loading request is transferred
from the batch-manufacturing apparatus to a host computer, and the host
computer retrieves batch-processable product lots to form a batch of plural
batch-processable product lots, and the batch-manufacturing apparatus
15 verifies whether or not a lot number of the batch reaches a predetermined
maximum batch-lot number, and an additional loading request is sent from
the batch-manufacturing apparatus to the host computer, and the host
computer is further retrieved whether or not any further additional
batch-processable product lot is present, and the additional
20 batch-processable product lot is carried to the batch-manufacturing
apparatus to add the additional batch-processable product lot to the batch.
